

MEMORANDUM FOR THE RECORD:

Per telephone conversation with ,
OWI/DSD on 5 November 1973, the Chicom Mig-21 C/E,
equipped with two ATOLL missiles and without external
fuel tanks, has an effective combat radius of 270 NM.
With external fuel tanks, combat radius would be in-
creased somewhat, but the fuel would either have to
be burned off or the tanks jettisoned prior to an
attempted zoom climb. The above is taking into account
that the Mig-21 is operating within a GCI environment.
